Multiple nodules over scrotum in a young man

Dr. Venkataram Mysore, Md, DipRcpath
Consultant dermatologist
Dr. Rathnakar K.S. MD
Consultant Pathologist

Keywords: nodules, scrotum, IFK

A 25 year old male patient presented with multiple asymptomatic nodules over scrotum of 5 years duration. The lesions had been slowly increasing in number and size. There was no history of discharge or pain. Patient also gave history of regular shaving of the region with a razor.

Examination revealed multiple, skin colored papules and nodules of size 0.2-1 cm, at the root of scrotum (fig-1). The nodules were globular, had a smooth surface, nontender and fixed to skin. A clinical diagnosis of 'multiple pilary cysts' was made and biopsy was performed, (fig-2).

What is your diagnosis?

Answer

Biopsy showed an endophytic lesion, characterized by a central invagination filled with keratin, related to the hair follicle. The invagination was deep and extended into mid dermis. In the wall of the invagination, proliferation of basaloid cells and squamous eddies could be seen. However, there was no dysplasia. The adjoining dermis showed infiltration with lymphomononuclear cells and dilated blood vessels. These features were consistent with Inverted follicular keratosis.

Discussion:

Inverted follicular keratosis (IFK) is a benign skin lesion that typically presents as an asymptomatic, solitary, verrucous nodule on the face of middle-aged and older individuals. It has been described at several other sites such as lips, thigh, and vulva.

The origin of the tumor has been a matter of debate. Helwig, who described it first in 1939, regarded it as a tumor arising from hair follicle-a view endorsed by Mehergan, who regards it as a tumor arising from the infundibulum of the hair follicle. Lever classified it as an irritated seborrheic keratosis. Occasional koilocyte-like cells have been noted in the tumor. This has lead to the opinion that the condition is caused by human papilloma virus and represents an invovled wart-hence the

2- Photomicrograph showing deep invagination at the site of hair follicle. Note the basaloid hyperplasia and squamous eddy in the wall of the invagination. H & E (2-X)
name verruca vulgaris with squamous eddies.

However, studies with polymerase chain reaction for DNA of human papilloma virus have failed to demonstrate the aetiological role of HPV consistently and hence the matter continues to be debated. The importance of IFK lies in the fact that it may cause diagnostic confusion with malignant lesions, especially squamous cell carcinoma (SCC), both clinically and pathologically. The histological features include:

1. Endophytic or exophytic tumour. The predominant growth is inwards—a feature, which distinguishes it from other variants of seborrheic keratosis.
2. Relation to hair follicle
3. Proliferation of basaloid cells and focal hypergranulosis

4. Squamous eddies
5. Occasional presence of atypical cells and mitotic figures
7. Dilated blood vessels and extravasation of RBCs in dermis.

Our case is notable for the unusual clinical morphology—multiple globular nodules with smooth surface, which caused diagnostic confusion with pilar cysts. While seborrheic keratosis is known to occur commonly over scrotum, IFK has not been previously described over scrotum. A previous report explained the occurrence on vulva to be due to repeated follicular trauma caused by shaving.

A similar causative mechanism could be responsible for the occurrence of the lesions at this unusual site in our case.

Under the Patronage of

**His Excellency Hajar Bin Hajar Al-Bin Ali**
The Minister of Health - State of Qatar

The Seventh GCC International Dermatology and Venereology Conference and Exhibition will be held on Doha - Qatar during the period from 16th till 19th December 2003.

P.O. Box: 3050, Hamad Medical Corporation
Department of Dermatology & Venereology
Doha - Qatar.
Tel. No.: 0974 - 4397026 / 4397927
Fax No.: 0974 - 4393058

A Group of International re-known Dermatologist are invited to run symposia and courses. The conference scientific activity will include:
1- Pediatric dermatology & Venereology
2- Atopy
3- Urticaria
4- Bullous disease
5- Dermatoses of pregnancy
6- Advances in Dermatology
7- What is New in dermatology
8- Dermatologic surgery
9- Cosmetology
10- Lasers in dermatology
11- Phototherapy
12- Therapeutics
13- Sexually Transmitted diseases
14- Dermatopathology
15- Rare cases of interest

The Conference will be held in Doha Sheraton Hotel
The Registration fees are:

* Participant US$ 400/-
* Accompanying person US$ 300/-

Registration fee includes congress documents, Luncheon, Banquet and Social program. You are invited to join us. This is a first call for papers you may write to:

The Gulf Journal Of Dermatology and Venereology is published biannually by The League Of Derma
tologists in the G.C.C. States, and will accept original articles on different fields of Dermatology,
STD's and Andrology.

Manuscripts

* Should be addressed to the Editor, Dr. Hassan Al Abdulla, P.O. Box 3050, Hamad
  Medical Corporation, Doha, Qatar. Fax: (+974) 393058

* Two copies of all elements of the paper are requested All the matter should be typed, double-spaced
  with wide margins, on one side of each sheet only.

* The paper should have the following arrangement: 1. Title page; 2. Abstracts; 3. Text; 4. References;
  5. Legends; 6. Tables; 7. Figures and 8. Arabic summary of the abstract and title if possible. Title
  page should bear the author(s) name(s), degrees, affiliation(s), and the address to which reprints are
  to be sent.

Tables and Figures

* Refer to figures as Fig. and give Arabic numeral.

* Submit 2 copies of each photograph and drawing on glossy paper of good quality.

* Use black ink for charts (line drawings).

* Identify figures on back by author's name and number of figure.

* Start tables at top of new page.

References

* All references in text must be identified by superscript Arabic numerals in the order in which they
  appear in the manuscript. When referring to a reference, type the last name of the author followed by
  its reference number. If referring to two authors, use both Last names, otherwise type the last name
  of first author followed by "et al".

* In Reference page, list the references in order of appearance in the manuscript. When referring to a
  periodical type last name followed by initials, title of paper, periodical name abbreviated as in the
  original one, year of publication, volume, pages. Type all authors if 3 or less, otherwise type the first
  3 authors followed by "et al". c.g. Breathnach AS, Wyllic LM. Electron microscopy of melanocytes
  to books, type name of author(s) (as above), title, edition, place, publisher, year, page referring to. e.g
  Mekusick VA. Mendelian inheritance in man. 7th Ed. Baltimore: John Hopkins University, 1986:
  1228. If the book has contributors, type the name of author(s), title, in: e&ors, title of book, place,
  publisher, year, page referred to e.g. Vickers CF. Topical corticosteroids. In: Fitzpatrick TB, Eisen
  2545.

* If manuscripts are prepared on IBM PC or compatible computer using word for windows, a 3-1/2 or
  5-1/4 inch diskette copy of the article will be appreciated by the publisher.
